

Eco Rally Portugal Environmental Policy

Classic Clube de Portugal, as the organiser of **Eco Rally Portugal** is committed to integrating social and environmental responsibility into the planning and delivery of this event. We recognise sustainability as an essential component of the operation of this event and aim to minimise the environmental impacts associated with our activities.

Having held nine previous editions we have established this event as a platform that brings together organisers, participants, sponsors, media, and the public, promoting sustainable mobility through motor sport. Building on this experience, we seek to keep creating relationships with all stakeholders based on trust and cooperation, promoting shared responsibility and encouraging action towards sustainability.

Eco Rally Portugal is dedicated to promoting responsible practices throughout all stages of the event, guided by the following principles:

- **Responsible resource management:** Practice the rational, efficient and environmentally responsible use of resources in all stages necessary to carry out the event, with the aim of reducing its environmental footprint.
- **Vehicle charging energy monitoring:** Monitor and record energy consumption at electric vehicle charging public points during the event to assess energy use and identify opportunities for improved efficiency.
- **Social responsibility and inclusion:** Promote equality, inclusion and active citizenship by encouraging the responsibility and involvement of all stakeholders, including the organisers, participants and the public.
- **Environmental awareness:** Inform participants, employees and other stakeholders about good environmental practices, including waste separation, through appropriate communication.
- **Sustainable work practices:** Integrate environmental considerations into operational planning and encourage employees and collaborators to adopt practices that minimise environmental impacts.

- **Waste management:** Prevent and minimise waste generation, prioritising reduction, reuse and recycling. Where waste cannot be avoided, ensure its proper selective separation and disposal at event locations and along the route.
- **Local cooperation:** Work with relevant environmental authorities and local service providers, including waste management companies, to support the responsible delivery of the event.
- **Sustainable transport:** Reduce transport-related environmental impacts wherever possible by encouraging public transport, carpooling and other lower-impact mobility options.
- **Protection of the environment:** Respect nature surroundings throughout the event, minimise disturbance to local ecosystems and ensure that all locations used are left clean and free of waste after the event.
- **Noise control:** Minimise noise levels associated with the event and ensure compliance with applicable local noise regulations, respecting nearby communities and the surrounding environment.
- **Communication and accountability:** Make this policy available to employees, participants and relevant stakeholders, encouraging their contribution to the implementation of these commitments.

This policy is to be reviewed and updated as required.

October, 2026

Paulo Almeida

President of Eco Rally Portugal's Organising Committee
